

The Man who knew Infinity made me cry and it made me feel fortunate that I have such great medical care compared to some other areas of the world. However, it made me question the existence of math. My favorite quote from Ramanujan was, " These math equations have no meaning unless it is a message from God." Though I am not particularly religious, I never thought that math could be a language between us and something so personal and important. Why do we do math? I thought about it before I went to sleep that night, and I realized that it was a language. Language allows us to understand each other, for it makes us have the happiest moments yet the most devastating as well. It is a part of our life as human beings. This language is different from all the other which makes it so unique, and it makes us want to discover more about math. Math isn't to torture us with loads of homework, but to let us see the unseen. I also favored the quote from Ramanujan, " Math are colors to me, like you see these grains of sand. What if we could see every individual grain? " Ramanujan sees the equations that we cannot naturally see, and I find it fascinating. There is something special that he sees in math that I never thought was possible. I really enjoyed the movie, Mrs. King.
