Rainforests have four layers

emergent layer is on top

with high winds here
and monkeys there
here a drip
there a drop
everywhere a drip-drop.

Rainforests have four layers

and canopy is right below

with iguanas here
and pythons there
here a chimp
there a sloth
everywhere a flying moth

Rainforests have four layers

look out for the understory

with jaguars here
red-eyed tree-frogs there
here a bug
there a bat
everywhere a stalking cat

Rainforests have four layers

and last to come is forest floor

with gorillas here
tarantulas there
here a plant
there an ant
everywhere a logger’s chant

( Sing to the tune “Old MacDonald” )
